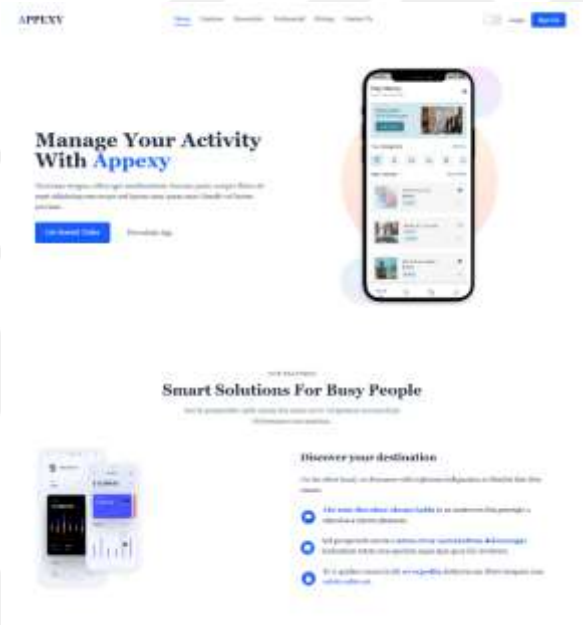
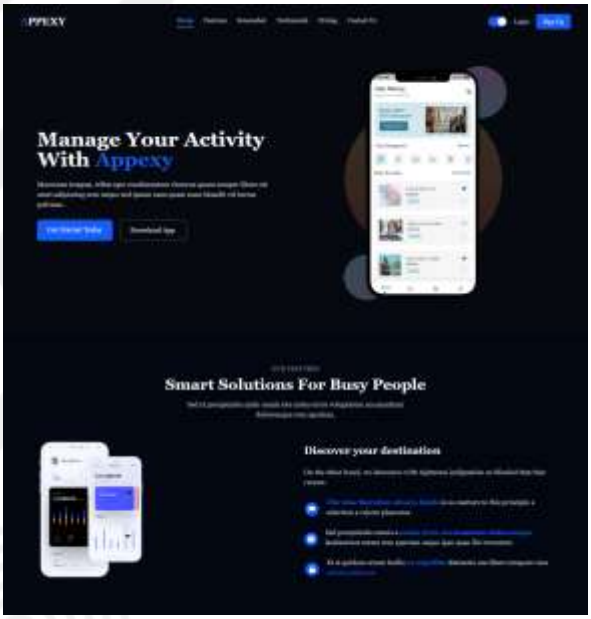
ON-SITE GUIDE
2025 - 2026

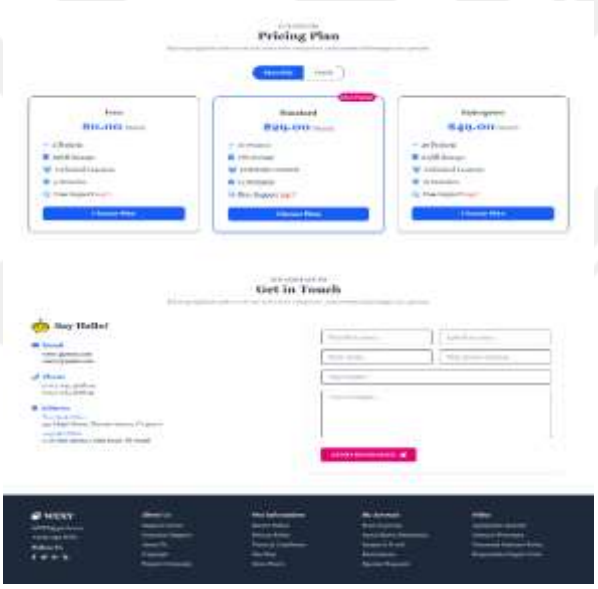
Web Development On-Site 4

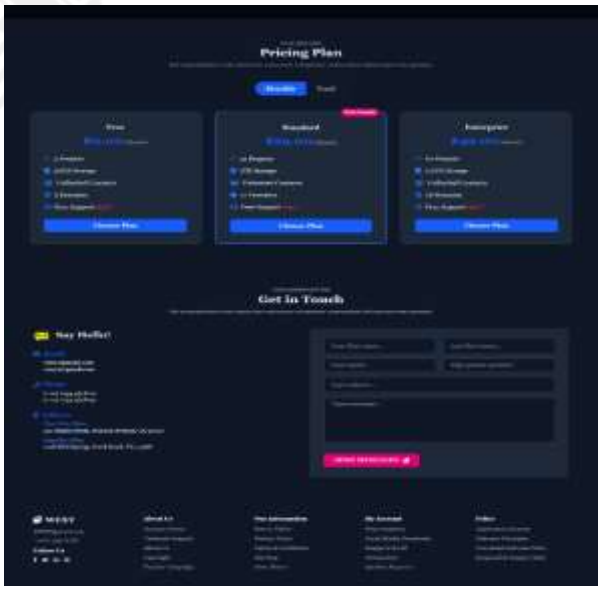
Tailwind CSS Landing Page Project

This workshop will guide you through building a modern landing page using **Tailwind CSS**, **HTML**, **JavaScript**, and **Font Awesome**.
You will learn how to set up Tailwind, structure a web project, build responsive UI components, and create dark mode using JavaScript.









Learning Objectives:

By the end of this workshop, students will:

- Install and configure Tailwind CSS using the CLI
- Understand input/output CSS workflow
- Organize a real front-end project structure
- Build a complete landing page (Hero, Features, Pricing, Form, Footer)
- Use Font Awesome for icons
- Create a fully functional Dark/Light mode toggle
- Apply Tailwind responsive classes
- Use JavaScript for interactivity

Step1-Install Tailwind Css Using Cli:

```
npm install tailwindcss @tailwindcss/cli
```

Step2-in input.css File Add :

src/input.css (file name)
@import "tailwindcss";

Step3-in the Vs Code Terminal Run :

Terminal
npx @tailwindcss/cli -i ./src/input.css -o ./src/output.css --watch

Step4- in src Folder Create a file called index.html.

Project Structure :

```
project-Name/
├── node_modules/
├── src/
│   ├── css/
│   │     ├── all.min.css (library For icons)
│   │     ├── input.css
│   │     └── output.css
```

```
│   ├── images/
│   ├── js/
│   │   └── main.js
│   └── webfonts/(important for font awesome icons to appear)
├── index.html
├── package-lock.json
└── package.json
```

What each folder does

- **css** → Tailwind + Font Awesome
- **images** → project images
- **js** → dark mode script
- **webfonts** → required for Font Awesome icons to display

Part 2 — Create The Landing Page Structure

Objective:

Build the main layout of the landing page using Tailwind.

Index.html

```
<!DOCTYPE html>
<html lang="en" class=" ">
<head>
  <meta charset="UTF-8" />
  <meta name="viewport" content="width=device-width, initial-scale=1.0"/>
  <title>Appexy</title>
  <link rel="stylesheet" href="css/all.min.css">
  <link rel="stylesheet" href="css/output.css">
</head>
```

```
<body class="font-serif bg-white text-gray-800 dark:bg-gray-900 dark:text-gray-100">

  <!-- Background Wrapper -->

  <script src="js/main.js"></script>

</body>
</html>
```

Part3-Enable Tailwind Dark Mode :

To launch Dark mode Go To input.css File and at this code:

Input.css
@custom-variant dark (&:where(.dark, .dark *));

After that go to main.js file and create a script for a toggle button to activate dark mode and normal mode and save selected theme in local storage .

Main.js

```
const toggle = document.getElementById('darkToggle');
  const html = document.documentElement;

  toggle.addEventListener('change', function () {
    if (toggle.checked) {
      html.classList.add('dark');
      localStorage.setItem('theme', 'dark');
    } else {
      html.classList.remove('dark');
